

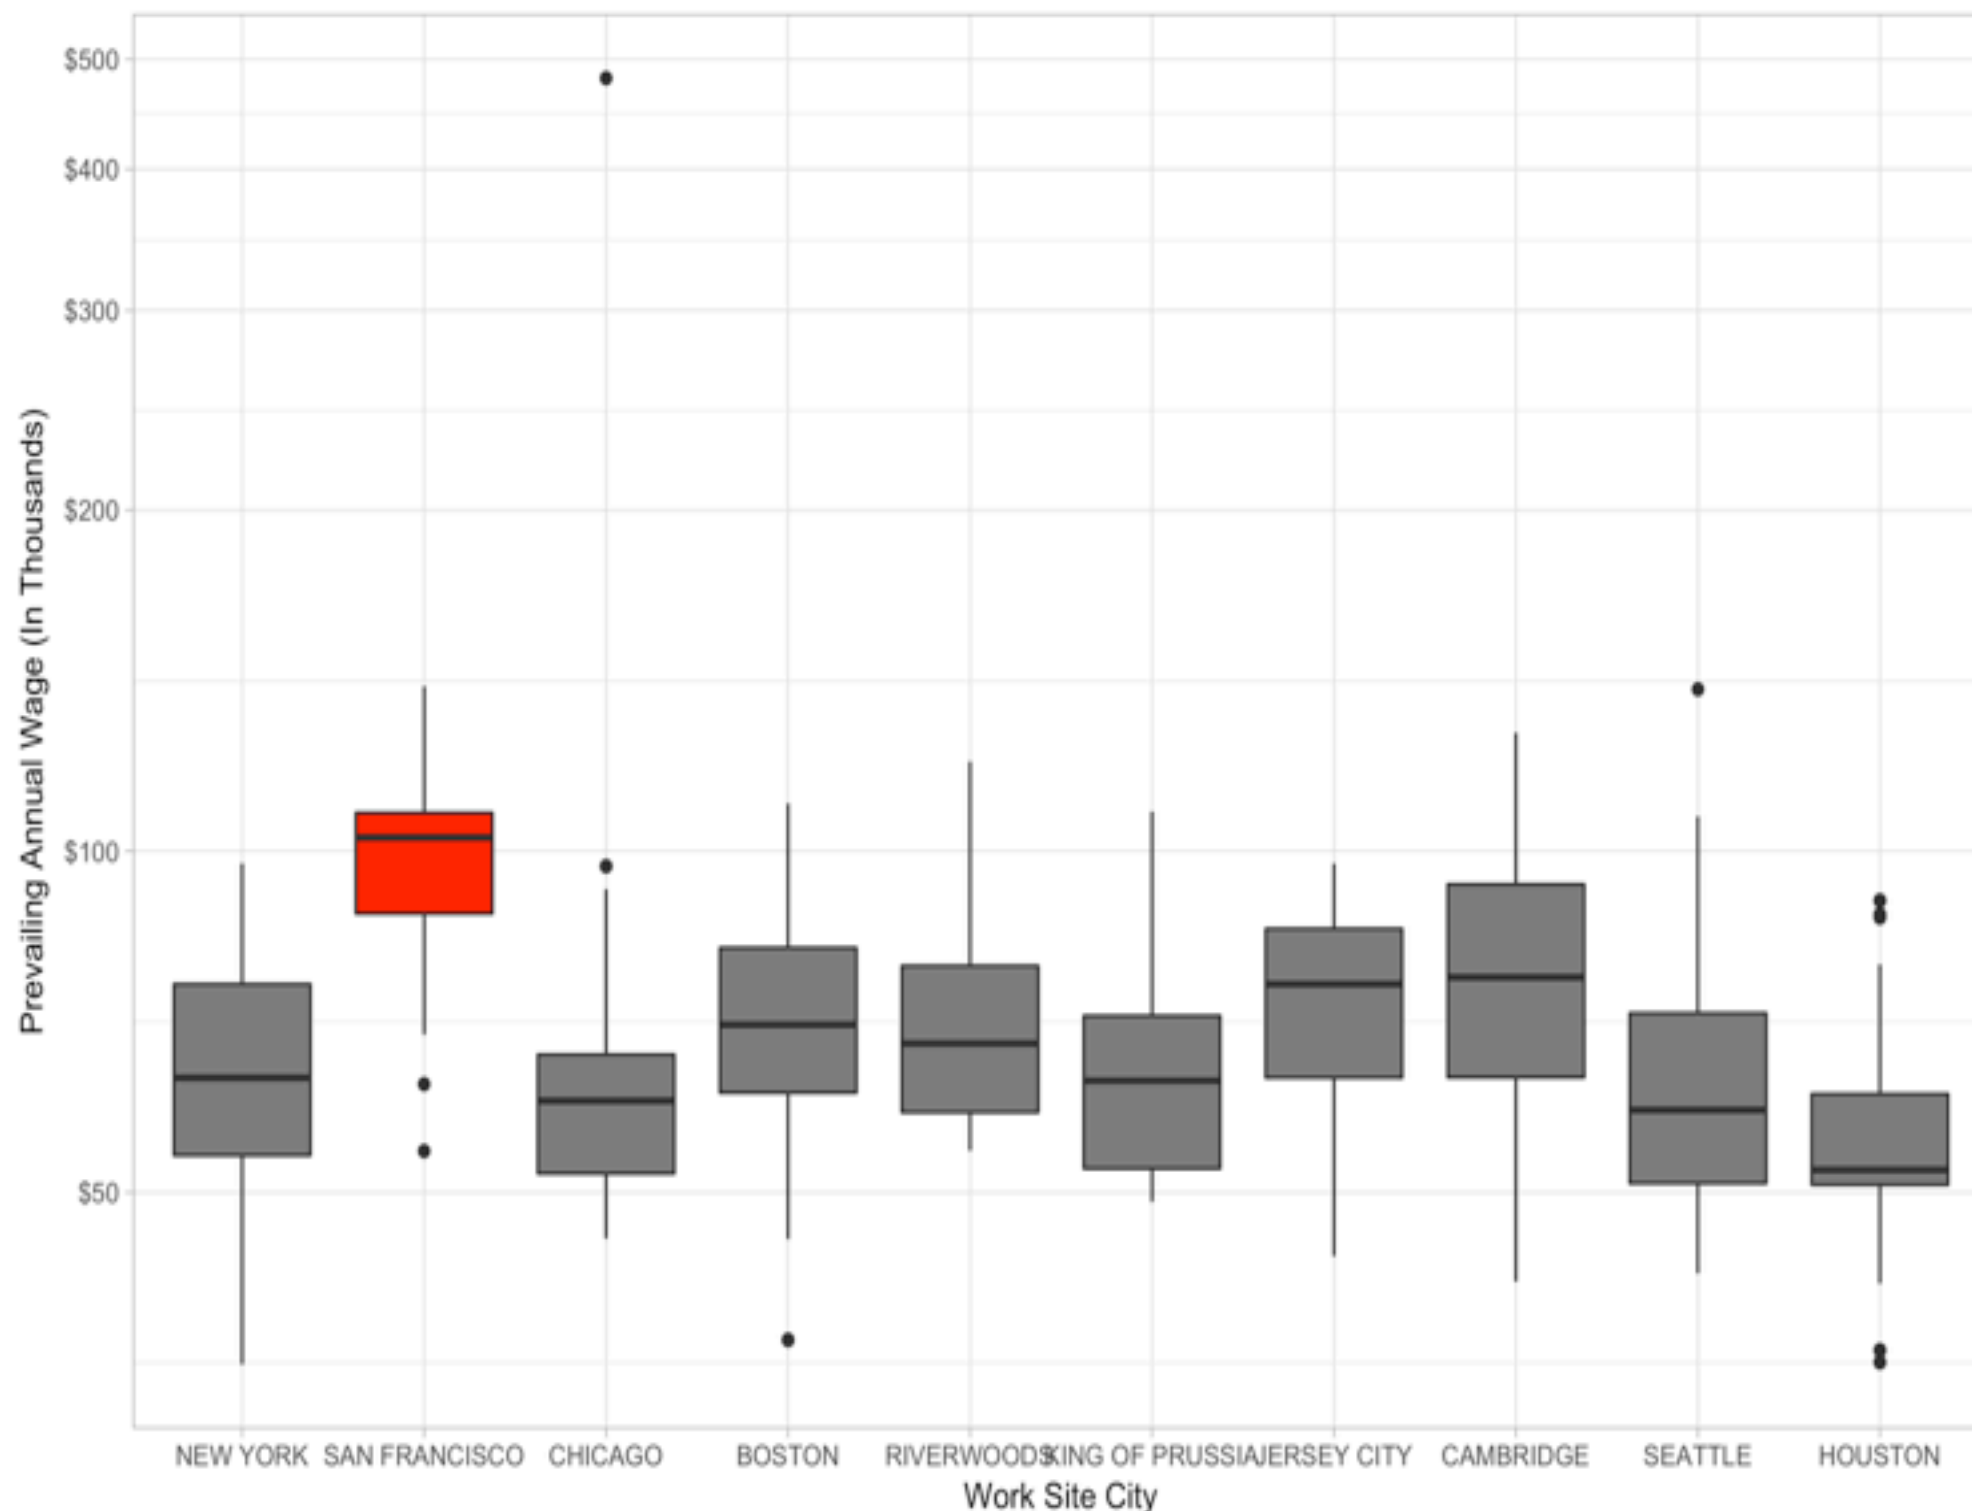

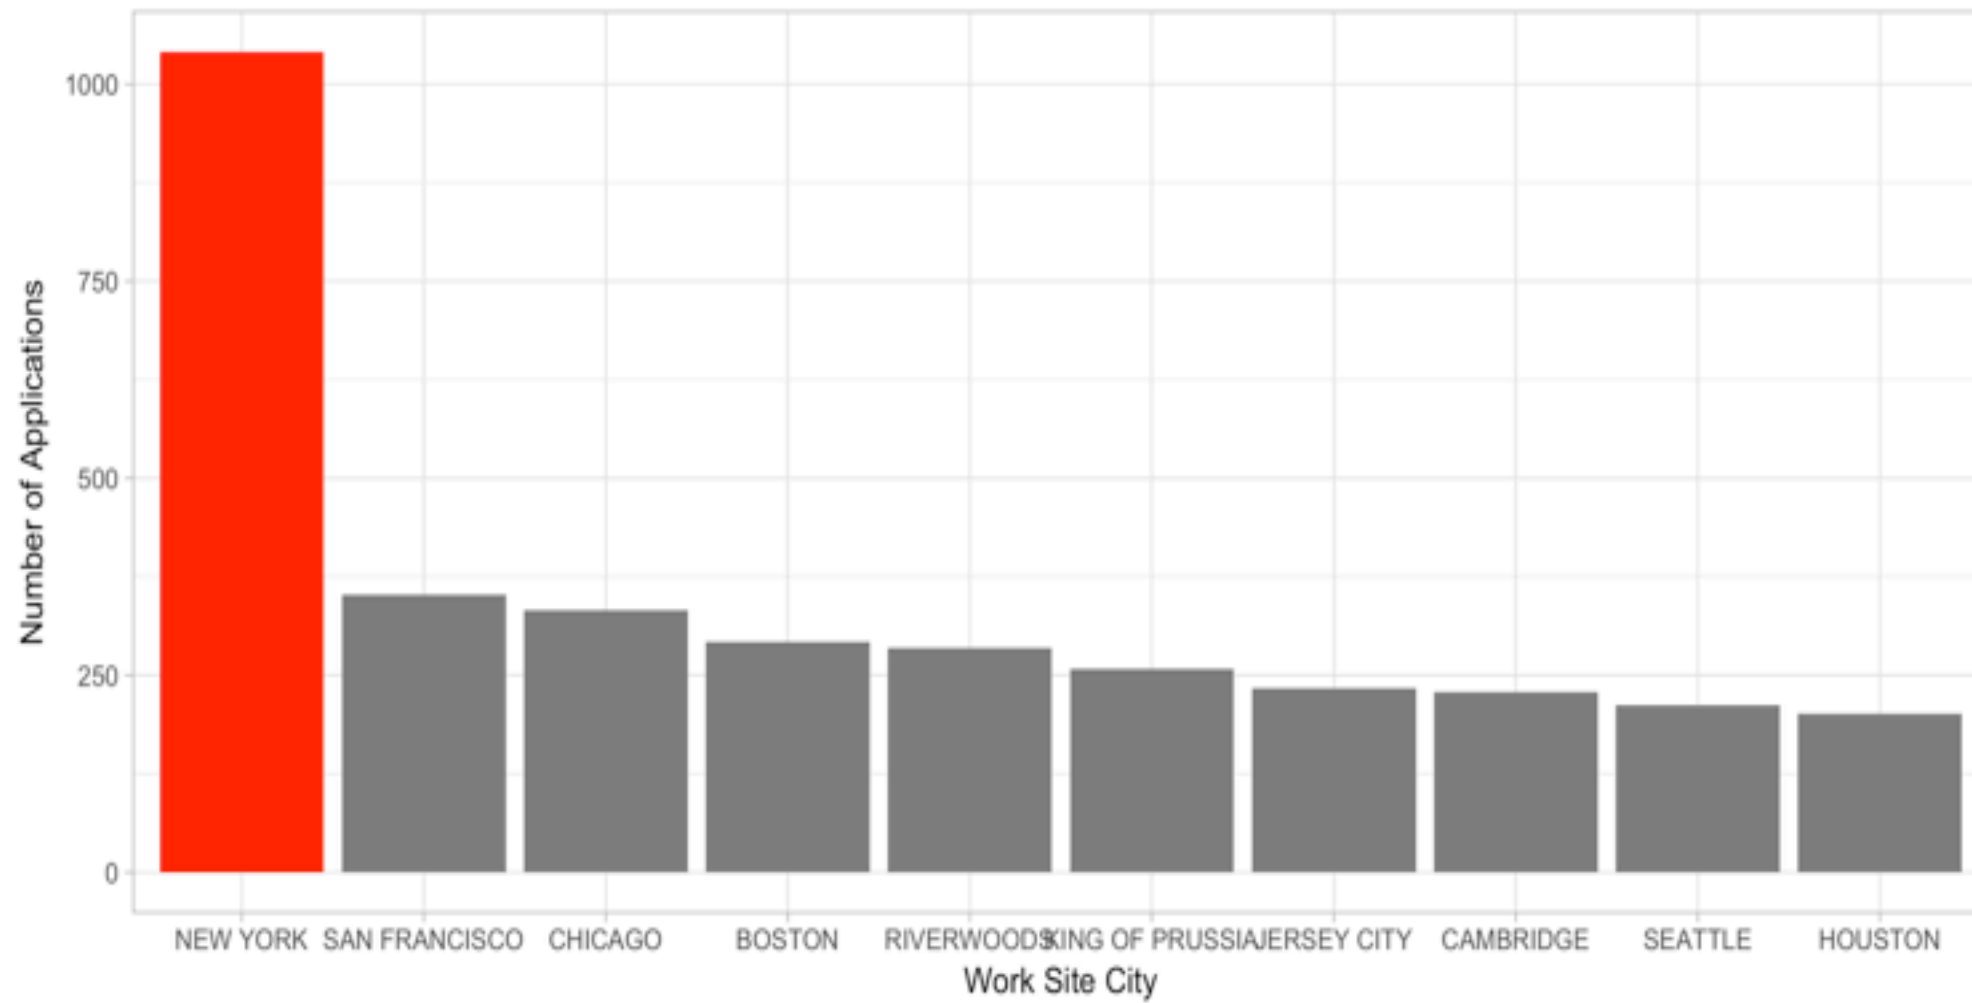

Figure 1: New York Offers Most New Jobs For International Statisticians In the past 5 years, While San Francisco Holds The Highest Average Salary Among Those 10 Cities Has Most Of Those New Jobs

The Number Of Applications Are Counted By The City The Applicant Is Actually Working In, Not The Location Of The Parent Company Which Might Sponsor The Visa Application

The following quoted from <https://www.kaggle.com/nsharan/h-1b-visa> :
 "The H-1B is an employment-based, non-immigrant visa category for temporary foreign workers in the United States. For a foreign national to apply for H1-B visa, an US employer must offer a job and petition for H-1B visa with the US immigration department. This is the most common visa status applied for and held by international students once they complete college/ higher education (Masters, PhD) and work in a full-time position."

Also from <https://www.kaggle.com/nsharan/h-1b-visa>, and I paraphrase a tiny bit:
 "The Office of Foreign Labor Certification (OFLC) generates program data that is useful information about the immigration programs including the H1-B visa. The disclosure data updated annually is available at this address: <https://www.foreignlaborcert.doleta.gov/performance.cfm>."
 Only the data of the applicants who has their annual prevailing wage on record in the past 5 years was used.

Figure 2: Salary of Statisticians Among The H1-B Visa Applicants In The US Stays Stable, While Their Job Opportunities Doubles In The Past 5 Years
